

MS9288C

MS9288C is a low-cost, low-power, high performance device, which consists of HD Transmitter, three 10-bit video Analog-to-Digital Converters and audio encoder, which can convert VGA signal to HD, maximum conversion rate of 165MHz. MS9288C supports L/R audio input. MS9288C with embedded MCU and ROM code.

Features

Triple 10-bit ADC	Black/White level expansion
Maximum analog sampling rate up to 165MHz	Color transition improvement
Support analog input range 0.65~1.1 [F-P]	Dynamic peaking
Auto offset/trim adjustment	Brightness, Saturation, Contrast, HUE adjustment
Double channel 24-bit ADC	Support PC raw interface
Sample rate is 40KHz	PCI master interface for DDC control
The operating speed is 165MHz	Support external crystal at 24.576MHz
Support 24-bit color depth, input and output resolution up to 1920@60Hz	QFP48 (5mm x 5mm)
Support Hot Plug	1.5V and 3.3V power supply
